2020-05-27 14:30:00 EST	tom	Toretta	tfarms@netxn.com	13200 San Juan Ave	Bakersfield	California	93314	Please Don't Dam the Chehalis	<p>I am writing to provide my input on the state's Draft Environmental Impact Statement (DEIS) for the proposed Chehalis River Basin Flood Damage Reduction Project. While I strongly support the state's efforts to mitigate the impacts of flooding in the Chehalis Basin, the proposal to build a large dam on the Chehalis River is not the right approach to address this serious issue. The Chehalis Basin communities deserve thoughtful, well-designed, and fiscally-sound solutions to address the basin's twin challenges of flood control and wild fish recovery. Unfortunately, the current dam proposal from the Chehalis Basin Flood Control District does not sufficiently address the flooding problem, would dramatically accelerate the decline of wild fish populations, and would cost taxpayers upwards of \$628 million. I am particularly concerned about spending \$628 million taxpayer dollars on a flood mitigation approach that will not excel at the one thing is intended to do – protect people from catastrophic flooding. According to the DEIS, in the event of another major flood event like 2007, the towns of Centralia and Chehalis would still experience serious flooding. Moreover, this lack of flood protection benefit is especially true the farther you move away from the proposed dam site because down-basin towns like Aberdeen would only experience 2 inches of flood reduction. I am also concerned about the irreparable harm the dam would have on wild fish and wildlife populations. This project would degrade critical spawning grounds for Chinook, coho salmon, and steelhead, further endangering these struggling fish populations that are vital to the basin's economy and environment. The project would also destroy hundreds of acres of quality forest, riparian habitat, and wetlands, which are essential for the diverse wildlife populations living in the Chehalis Basin and serve as critical migratory routes and connected habitat for wildlife such as elk and the endangered marbled murrelet. Additionally, the Draft Environmental Impact Statement fails to meet some basic requirements of the State Environmental Policy Act because it: 1) Lacks the mitigation measures to address the significant impacts the DEIS details, which hinders the public's ability to make informed decisions about the project. 2) Does not sufficiently analyze the least environmentally-harmful alternatives to the proposed dam. 3) Fails to properly acknowledge the full scale of environmental impacts the proposed dam would generate as well as the future impacts of the "expanded" version of this dam that is discussed in the DEIS. 4) Ignores the substantial impacts the proposed dam would have on the migratory routes and connected habitats wildlife need and fails to propose how these impacts could be mitigated. For all of these reasons, I oppose the Chehalis River Basin Flood Damage Reduction Project. However, while this proposal and DEIS are unacceptable, it is important to acknowledge that the status quo is also untenable. We need a basin-wide approach to flood resiliency that benefits local communities, protects residents, and protects our wild fish and wildlife populations. I encourage the Chehalis Basin leaders to go back to the drawing board to develop a comprehensive solution that more effectively addresses the basin's challenges of flood control and fish recovery. Thank you for your work to create a brighter future for the Chehalis Basin and for your consideration of my comments.</p>

I encourage the Chehalis Basin leaders to go back to the drawing board to develop a comprehensive solution that more effectively addresses the basin's challenges of flood control and fish recovery. I also want to point out that dams have been proven over and over again to cause more problems than they solve. This is part of the reason why so many dams are now being dismantled. Please don't perpetuate faulty 20th-century thinking by making the same mistakes over again. Thank you for your work to create a brighter future for the Chehalis Basin and for your consideration of my comments. Sincerely, Arwyn Smalley</p>

Moreover, this lack of flood protection benefit is especially true the farther you move away from the proposed dam site because down-basin towns like Aberdeen would only experience 2 inches of flood reduction. I am also concerned about the irreparable harm the dam would have on wild fish and wildlife populations. This project would degrade critical spawning grounds for Chinook, coho salmon, and steelhead, further endangering these struggling fish populations that are vital to the basin's economy and environment. The project would also destroy hundreds of acres of quality forest, riparian habitat, and wetlands, which are essential for the diverse wildlife populations living in the Chehalis Basin and serve as critical migratory routes and connected habitat for wildlife such as elk and the endangered marbled murrelet. Additionally, the Draft Environmental Impact Statement fails to meet some basic requirements of the State Environmental Policy Act because it: 1) Lacks the mitigation measures to address the significant impacts the DEIS details, which hinders the public's ability to make informed decisions about the project. 2) Does not sufficiently analyze the least environmentally-harmful alternatives to the proposed dam. 3) Fails to properly acknowledge the full scale of environmental impacts the proposed dam would generate as well as the future impacts of the "expanded" version of this dam that is discussed in the DEIS. 4) Ignores the substantial impacts the proposed dam would have on the migratory routes and connected habitats wildlife need and fails to propose how these impacts could be mitigated. For all of these reasons, I oppose the Chehalis River Basin Flood Damage Reduction Project. However, while this proposal and DEIS are unacceptable, it is important to acknowledge that the status quo is also untenable. We need a basin-wide approach to flood resiliency that benefits local communities, protects residents, and protects our wild fish and wildlife populations. I encourage the Chehalis Basin leaders to go back to the drawing board to develop a comprehensive solution that more effectively addresses the basin's challenges of flood control and fish recovery. Thank you for your work to create a brighter future for the Chehalis Basin and for your consideration of my comments.</p>

2020-05-27 18:31:46 EST	Joseph	Gabiou	info@wobblycart.com	10940 Independence	Rochester	Washington	98579	Please Don't Dam the Chehalis	<p>I am writing to provide my input on the state's Draft Environmental Impact Statement (DEIS) for the proposed Chehalis River Basin Flood Damage Reduction Project. While I strongly support the state's efforts to mitigate the impacts of flooding in the Chehalis Basin, the proposal to build a large dam on the Chehalis River is not the right approach to address this serious issue. The Chehalis Basin communities deserve thoughtful, well-designed, and fiscally-sound solutions to address the basin's twin challenges of flood control and wild fish recovery. Unfortunately, the current dam proposal from the Chehalis Basin Flood Control District does not sufficiently address the flooding problem, would dramatically accelerate the decline of wild fish populations, and would cost taxpayers upwards of \$628 million. I am particularly concerned about spending \$628 million taxpayer dollars on a flood mitigation approach that will not excel at the one thing is intended to do – protect people from catastrophic flooding. According to the DEIS, in the event of another major flood event like 2007, the towns of Centralia and Chehalis would still experience serious flooding. Moreover, this lack of flood protection benefit is especially true the farther you move away from the proposed dam site because down-basin towns like Aberdeen would only experience 2 inches of flood reduction. I am also concerned about the irreparable harm the dam would have on wild fish and wildlife populations. This project would degrade critical spawning grounds for Chinook, coho salmon, and steelhead, further endangering these struggling fish populations that are vital to the basin's economy and environment. The project would also destroy hundreds of acres of quality forest, riparian habitat, and wetlands, which are essential for the diverse wildlife populations living in the Chehalis Basin and serve as critical migratory routes and connected habitat for wildlife such as elk and the endangered marbled murrelet. This project would degrade critical spawning grounds for Chinook, coho salmon, and steelhead, further endangering these struggling fish populations that are vital to the basin's economy and environment. The project would also destroy hundreds of acres of quality forest, riparian habitat, and wetlands, which are essential for the diverse wildlife populations living in the Chehalis Basin and serve as critical migratory routes and connected habitat for wildlife such as elk and the endangered marbled murrelet. Additionally, the Draft Environmental Impact Statement fails to meet some basic requirements of the State Environmental Policy Act because it: 1) Lacks the mitigation measures to address the significant impacts the DEIS details, which hinders the public's ability to make informed decisions about the project. 2) Does not sufficiently analyze the least environmentally-harmful alternatives to the proposed dam. 3) Fails to properly acknowledge the full scale of environmental impacts the proposed dam would generate as well as the future impacts of the "expanded" version of this dam that is discussed in the DEIS. 4) Ignores the substantial impacts the proposed dam would have on the migratory routes and connected habitats wildlife need and fails to propose how these impacts could be mitigated. For all of these reasons, I oppose the Chehalis River Basin Flood Damage Reduction Project. However, while this proposal and DEIS are unacceptable, it is important to acknowledge that the status quo is also untenable. We need a basin-wide approach to flood resiliency that benefits local communities, protects residents, and protects our wild fish and wildlife populations. I encourage the Chehalis Basin leaders to go back to the drawing board to develop a comprehensive solution that more effectively addresses the basin's challenges of flood control and fish recovery. Thank you for your work to create a brighter future for the Chehalis Basin and for your consideration of my comments.</p>

2020-05-27 19:17:34 EST	Roger	Bialous	roger@georgetownbeer.com	2451 53rd Ave SW	Seattle	Washington	98116	Please Don't Dam the Chehalis	<p>I am writing to provide my input on the state's Draft Environmental Impact Statement (DEIS) for the proposed Chehalis River Basin Flood Damage Reduction Project. While I strongly support the state's efforts to mitigate the impacts of flooding in the Chehalis Basin, the proposal to build a large dam on the Chehalis River is not the right approach to address this serious issue. The Chehalis Basin communities deserve thoughtful, well-designed, and fiscally-sound solutions to address the basin's twin challenges of flood control and wild fish recovery. Unfortunately, the current dam proposal from the Chehalis Basin Flood Control District does not sufficiently address the flooding problem, would dramatically accelerate the decline of wild fish populations, and would cost taxpayers upwards of \$628 million. I am particularly concerned about spending \$628 million taxpayer dollars on a flood mitigation approach that will not excel at the one thing is intended to do – protect people from catastrophic flooding. According to the DEIS, in the event of another major flood event like 2007, the towns of Centralia and Chehalis would still experience serious flooding. Moreover, this lack of flood protection benefit is especially true the farther you move away from the proposed dam site because down-basin towns like Aberdeen would only experience 2 inches of flood reduction. I am also concerned about the irreparable harm the dam would have on wild fish and wildlife populations. This project would degrade critical spawning grounds for Chinook, coho salmon, and steelhead, further endangering these struggling fish populations that are vital to the basin's economy and environment. The project would also destroy hundreds of acres of quality forest, riparian habitat, and wetlands, which are essential for the diverse wildlife populations living in the Chehalis Basin and serve as critical migratory routes and connected habitat for wildlife such as elk and the endangered marbled murrelet. Additionally, the Draft Environmental Impact Statement fails to meet some basic requirements of the State Environmental Policy Act because it: 1) Lacks the mitigation measures to address the significant impacts the DEIS details, which hinders the public's ability to make informed decisions about the project. 2) Does not sufficiently analyze the least environmentally-harmful alternatives to the proposed dam. 3) Fails to properly acknowledge the full scale of environmental impacts the proposed dam would generate as well as the future impacts of the "expanded" version of this dam that is discussed in the DEIS. 4) Ignores the substantial impacts the proposed dam would have on the migratory routes and connected habitats wildlife need and fails to propose how these impacts could be mitigated. Thank you for your attention.

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

The Washington State Department of Ecology has been disappointing of late, not intervening to stop the construction of the PSE liquified-natural-gas facility on the Tacoma Tidelands, despite the illegitimate and false data used in the SEIS submitted for that plan and in obvious ignorance of the dangers of building a container of potentially explosive materials on top of a construction method proven by scientific study to be unstable, especially in the presence of rising sea levels. Washington's DOC needs to become a more-active player on the right side of arguments. This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Roger Martin
Tacoma, WA 98466

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment. I will say on a personal level that my family has already noticed that streams and rivers that usually have various fish- salmon in particular- have not had any of these animals swimming through them for a long, long time. Destroying and replacing the rivers with all sorts of man made objects, even if for a good cause, is doing more damage than can ever be repaired. We need those fish in the water and we need to let them do what they've done for so long- otherwise our ecosystem will continue to die. What would we be left with, if we ruin the cycle of life that makes Washington so full of it? So verdant, evergreen, splendid? We are a bastion for wildlife in our forests, in our waters, in our skies, in our soil. And we can still do so much more to benefit the creatures that make our area incredibly unique! But we have to put them first, their needs ahead of our own, because it really won't kill us to avoid building a dam. Restructuring things to benefit the animals and strengthen the land against flooding would do so much more to keep our world working smoothly.

Thank you again for reading my concerns, I hope that together we can keep our world lively.

Sincerely,

Rachel Bowley
Renton, WA 98056

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Please save our wildlife. Thank you for considering my comment.

jeri ichikawa
Battle Ground, WA 98604

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

It was not long ago that our state collectively mourned an orca mother's loss of her newborn child. The killer whale population does not have enough food to be able to reproduce viable offspring. If we do not protect the few food sources they have left, we run the risk of starving this iconic Pacific Northwest species into extinction.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Allinee Hall
Seattle, WA 98133

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

We need to take better care of what is left of our environment, for wildlife, marine life, and people. A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Priscilla Martinez
Bothell, WA 98011

Dear Washington State Department of Ecology,

It's time to do things differently. Dams are not the only answer. We keep destroying habitat then wonder why other species are suffering. Choose to do something differently and set a precedent for others. The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

I am from the Colville nation. Bonneville Power damned the Columbia many years ago and cut off our main source of subsistence - salmon. Besides salmon being sacred to our people, they were more than half of our food source. We've spent many, many years, a lot of expense, and several lawsuits to be able to re-establish our salmon runs. Salmon are also Orca whale's food. Our Soutgern Orca population is already in danger. We need to protect the salmon, the Chehalis tribe's subsistence, and the Orcas. Please do not build this dam!! Thank you for considering my comment.

Sincerely,

Robin Youngblood
Tonasket, WA 98855

Building a dam is a terrible idea and not the solution..a solution and the only one is to stop doing what's causing the flooding to worsen to begin with, until then no plan will work..Stop building on wetlands !! That's just common sense Thank you for considering my comment.

Sincerely,

Diane whisler
Centralia, WA 98531

Dear Washington State Department of Ecology,

Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Seattle, WA 98126

Dear Washington State Department of Ecology,

Are you kidding?? This is real?? With all the grass roots protests and rallies that are happening to save the salmon and the orcas, by breaching the lower 4 Snake River dams, you are actually wanting to build another one?? What rock are you all living under??? The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

There are countless success stories of rivers that have been restored with these methods that include tearing down dams. Need some direction for resources, data and information? Contact American Rivers.org!!!! A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

Roberta Copenhefer
Mabton, WA 98935

Dear Washington State Department of Ecology,

The notion of adding a dam to the Chehalis river at this time is so out of date and wrongheaded as to defy explanation. The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding. All around us in the Pacific Northwest we urgently need to remove damaging structures and restore healthy, self-maintaining habitat.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Margaret A Mills
Deer Harbor, WA 98243

Dear Washington State Department of Ecology,

As a kid who grew up in the Puget Sound region, visiting haunts of my parents in western Washington, I am writing to tell you that you should NOT even consider any dams on the Chehalis River. My dad grew up in Adna, Washington, right on the river. As a child, he spent time exploring that wonderful ecosystem. As a parent, he took me there to share his special places. One of the marvels of which my dad spoke was the occasional flooding which unearthed a whole new array of things to be discovered, not the least of which were arrowheads. You should realize that the era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding. This is the only thing that will encourage the ecosystem to manage itself and protect surrounding properties in the process. A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Maradel Gale
Bainbridge Island, WA 98110

Dear Washington State Department of Ecology,

As a resident of Washington State I am aware of the effects dams have had on our wildlife which, in turn, has had, and will continue to have a substantial effect on our economy.

The disruption to the ecological balance in our area is having devastating effects on the wild salmon population, which is putting the orca population on a path to extinction. Dependent upon the health of this system are the native communities of the area, already fighting economic, cultural, and political disadvantages put upon them through hundreds of years of prejudice and oppression.

The ill effects of damming are already well established, and yet humans continue to follow the foolish path rather than sacrifice themselves for their own good. That there is no longer room for choice in these matters. The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Susanne Weil
Onalaska, WA 98570

Dear Washington State Department of Ecology,

A few years ago the city of Bellingham renovated a local stream with oxbows to prevent flooding. The city also removed a concrete and rock bulkhead at Boulevard Park. Last year my homeowners association removed a timber and rock bulkhead at our marina. Both were replaced with natural sloping cobble beaches. In my direct experience governments are moving toward more natural flood protection. The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

South Prairie, WA 98385

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

In 2003, the USACE provided a plan based off the Dutch initiative known as Room for the River. This plan is far less costly and far less destructive. I urge you to consider this plan instead of the dam project, especially now with the havoc coronavirus is creating to funding. Also, it is incredibly arrogant for humans to continue to build in areas known for flooding and expect to have a safe haven. It is time to move people out of harm's way and prohibit further development on flood plains. The history of flooding in the Chehalis basin is legend: http://www.chronline.com/from-native-american-legends-to-2007-a-history-of-flooding-in-the-chehalis-river-basin/article_5907dba8-dad4-11e7-9643-5b146dd7cbcb.html This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Teri Wright
Port Ludlow, WA 98365

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding. More dams in this day and age, when the biosphere is in free fall collapse, is a ludicrous idea. Instead, we humans should be restoring wetlands and planting floodplain trees, and completely stopping the building of houses and industry along these floodplains. We humans are part of the earth, we share the planet with thousands of other animals and plants, water and rock, and I hate the way we treat this stunning planet! A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Lenore Bussing
Winthrop, WA 98862

Dear Washington State Department of Ecology,

I am an attorney in Spokane and I am writing to you regarding the Chehalis River. The time for building dams has come to an end and is so shortsighted and detrimental to the environment. Our state should not be considering building a new dam on the Chehalis River for flood control, but instead we should be focusing on restoring natural processes that protect against flooding. It has been demonstrated that humans cannot replace nature by working against it. A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble. A dam would, in turn, harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology should stop using the 'might makes right' approach and instead consider the 'local action' alternative as has been presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project. Building a dam would be a huge mistake and a tremendous waste of taxpayer funds.

The local action option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Apparently those in power have learned nothing from the extremely negative impacts that the dams that were built have caused. Someone said, 'The only thing that we have learned from history is that people do not learn from history.' Our state is a significant example of that statement.

Sincerely,

Cheryl Mitchell
Spokane, WA 99205

Dear Washington State Department of Ecology,

You're kidding right? A dam? In 2020? With what we know now about their harmful effects on human and non-human life? Please, the era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Jamie K Donaldson
Bellingham, WA 98225

Dear Washington State Department of Ecology,

Once again our poor water management means wildlife and the ecology of another riparian gem must be destroyed. I am saddened that in a state that prides itself on being called The Green state falls to the pressure of a few who failed to live with the land, and feel the need to destroy the land for the many. The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

S E Hagstrom
Woodinville, WA 98072

Dear Washington State Department of Ecology,

The recent trend in Washington has been to dismantle old dams that did to their rivers exactly what building a dam on the Chehalis River would do: adversely affect the species that live in and need a free river to thrive and make the journeys that they are intended to make. The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Roberta McNair
Gig Harbor, WA 98335

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

Please just leave our natural rivers ALONE. We don't need artificial man-made problems - too many of them already interrupting nature. No new dams, and pull down the Lower 4 Snake River Dams too, they're long past their prime. This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Jill Hein
Coupeville, WA 98239

Dear Washington State Department of Ecology,

Damage caused by the Chehalis River's enhanced flood cycle is the predictable result of decades worth of hyper-aggressive road construction and clearcut logging on both private and state lands upstream. In other words, human mistakes of the past and present are the direct source of the human miseries stemming from the recurrent flooding. Adding yet another unnatural element to this watershed -- a flood control dam -- is simply insult atop injury.

The era of building dams has mercifully come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The push for a new dam is a classic case of wanting one's cake and eating it too. It's the fallacious notion that the business of reckless forestry practices exacerbating the flooding can continue without modification, so long as an artificial installation is in place downvalley to hold the surging waters back. The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and absolutely not build this dam.

This option will allow state and local communities to focus on restoring habitat and promoting land-use practices that will both reduce flooding and help to save salmon, orcas and other wildlife that depend on this important river system. The smart choice is the one that respects natural waterways, landscapes, and ecosystems as a whole.

Sincerely,

James Scarborough
Bellingham, WA 98225

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

This is absolutely the worst decision possible. Scientists and people far, far smarter than Trump, which is just about everybody, have deemed this a terrible, fatal plan. A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Julia McLaughlin
Rochester, WA 98579

Dear Washington State Department of Ecology,

We should not be building a new dam on the Chehalis River for flood control. Let's focus instead on the more modern solution of protecting and restoring natural processes to prevent flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Barbara Baugh
Lacey, WA 98503

Dear Washington State Department of Ecology,

We have learned the harms the dams do and must act on the lessons learned from existing dams. The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring a myriad of natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species which are already in trouble — and will in turn further harm already endangered Southern Resident killer whales, that depend on salmon for their survival.

Dam construction would cause direct habitat loss, changes to land-cover types, and fragmentation of habitat thereby further limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and simply not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will: stop the flooding; help to save salmon,;and with the salmon, the the orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Boni Biery
Seattle, WA 98133

Dear Washington State Department of Ecology,

Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam. Here is good reasoning for NOT building dams: <https://www.dawn.com/news/1419121> This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system. Here is a resource for an alternative: https://www.nrcs.usda.gov/Internet/FSE_PLANTMATERIALS/publications/idpmcar2261.pdf And another: <http://www.greening.in/2013/05/how-trees-help-in-preventing-floods.html> Thank you for considering my comment.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Flood management will be of increasing importance going forward into more extreme weather events here and around the world. Working out ecosystem-integrated flood control measures through wetland restoration, flood plain management and other ways are vital. Dams are far more damaging than constructive, causing loss of habitat, biodiversity, ecosystem services and existing ways of life, and costing more water loss from greater water surface area. Please choose 'local action' instead of this antiquated technology with all of its consequences.

Thank you for considering my comment.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system. No more dams. No more violating Indigenous people's rights. Enough. Thank you for considering my comment.

Sincerely,

Rena Bailey
Lynnwood, WA 98036

Dear Washington State Department of Ecology,

We cannot keep going down this same old destructive road. Mistreatment of upriver land and forests must stop. It has ruined the land upriver and now the downriver land is affected. Using dams as a fix to this poor method of land use is not acceptable. I'm not willing to sacrifice the incredibly important wild salmon runs on the Chehalis or the Southern Resident killer whales who's path to extinction absolutely must be turned around. These orca co-evolved with these salmon and they need them. Ecosystems need these wild salmon and a free flowing river with forests that are left untouched. As a citizen of Washington state, a stakeholder and steward, I inform with urgency, the Chehalis dam project must cease immediately. The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. *** I have been fortunate enough to fish on the Chehalis River and it was an exciting time for me. And I was able to cook my catch! This river is very important to many fish, animals and people. Please do not build this dam. Thank you for considering my comment.

Sincerely,

Daniel Zeh
Spring Hill, FL 34606

Dear Washington State Department of Ecology,

Why is the State of Washington considering building a new dam on the Chehalis River for flood control. They should be working to bring back natural ebbs and flows to prevent flooding.

A dam on the Chehalis would be bad for salmon and steelhead that are already endangered and Southern Resident killer whales, which need salmon for their survival. Building a dam would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Joanna Vintilla
Seattle, WA 98133

Dear Washington State Department of Ecology,

Damming the Chehalis River would diminish the salmon runs that the Southern Resident Orca need for survival. Already Chehalis River salmon runs are way below historic numbers. But allowing a dam to be built on the Chehalis would not only further endanger the salmon, but the orcas who rely upon the salmon. We should be restoring the habitat up and down the Chehalis River valley to control floods - aggressively reforest clear cuts, take out unneeded logging roads, limit pesticide use. There are so many things that we can do that will benefit the entire system. Why do we need a dam? That is so 20th century.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Paul Birkeland
Seattle, WA 98115

Dear Washington State Department of Ecology,

I am adding my voice to the letter below (I totally support this viewpoint). We have the knowledge and practices to create a “win-win” situation with concern for flooding. We do not need to put in place things that harm wildlife and the native food chain as a sacrifice to human needs. Such as a new dam! The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Kristin Fernald
Lopez Island, WA 98261

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Our beautiful State of Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding!! A dam on the Chehalis would MOST DEFINITELY threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which COMPLETELY depend on salmon for their survival!! Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology MUST take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and NOT BUILD THIS DAM!!.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and HELP TO SAVE THE SALMON, orcas and other wildlife that depend on this important river system.

My wife and I want to THANK YOU so much for considering our comment.

Sincerely,

Ken and Jan Livingston
Mukilteo, WA 98275

Dear Washington State Department of Ecology,

This is a non-starter - the idea to build a dam? To threaten even more of our precious salmon runs? To impact the ability of the native people to their heritage and the 'treaty' we signed? NO - don't do it! Don't even think about it! The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Thank you for considering my comment.

Sincerely,

Nima Rosepiper
Great Barrington, MA 1230

Dear Washington State Department of Ecology,

I have been informed that Washington is considering building a new dam on the Chehalis River for flood control. While in the past that is what we did, I believe that building dams head come to an end for good reason. I think that America should instead focus on restoring natural processes to protect against flooding. This is the better solution for our wildlife and the land. To contact a dam would: 1. threaten salmon and steelhead species that are already in trouble 2. harm endangered Southern Resident killer whales that depend on salmon for their survival 3. cause habitat loss 4. change landcover types 5. fragment and limit access to riparian corridors for large and small wildlife I believe that the 'local action' alternative presented in the draft EIS for the proposed Chehalis River Basin Flood Damage Reduction Project is the best plan. I ask that the Department of Ecology accept this action and not build a dam for all of the reasons mentioned above. Also, this action will allow state and local communities to focus on restoring habitat and promoting land-use practices that will stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

The time for dams is at an end. Let's think smarter for all species. Thank you for your consideration.

Sincerely,

Debra Hunt
Kalama, WA 98625

Dear Washington State Department of Ecology,

Why on earth is this dam being considered as we take down dams, realizing the damage they do? The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

marjorie Fields
Edmonds, WA 98020

Dear Washington State Department of Ecology,

It is time to REMOVE dams, not build new ones. We need solar and wind energy, not destruction of our ocean life and rivers, and flood control should be done with planting of trees and habitat restoration. The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and NOT build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Dr. E. O'Halloran
Spokane, WA 99208

Dear Washington State Department of Ecology,

I care about us keeping this beautiful river and all its gentle creatures safe and thriving. And I agree with the sentiments below: The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Rebecca Butler
Edmonds, WA 98026

Dear Washington State Department of Ecology,

We have learned that dams cause more problems than they solve. We should not be considering damming the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and the orcas which depend on salmon for their survival. Take the 'local action' alternative as presented in the draft environmental impact study.

Sincerely,

Susan Dowling
Bonney Lake, WA 98391

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam. Keep it natural; do we need another dam? This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Helga O'Brien
Sequim, WA 98382

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

It is time to be removing dams on the Snake. The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Jim Byrne
Ridgefield, WA 98642

Dear Washington State Department of Ecology,

As a resident of Port Townsend, WA, I am deeply concerned about the health of the critically-endangered Southern Resident Orcas. Lack of chinook salmon, their main dietary requirement, is shortening their lives through malnutrition and starvation, and is causing more reproductive difficulties and calf mortality.

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble. Dam construction would cause direct habitat loss for fish and amphibians, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

We also should not be investing public resources approaching a billion dollars to destroy habitat with the proposed dam. This limited 'solution' appears designed to protect private interests who built in flood plain areas. Instead, the public should invest in buying them out and restoring the floodplain and uplands. This can lead to desperately needed new jobs in a new restoration economy of this area. Thank you for considering my comment.

Sincerely,

Debra Ellers
Port Townsend, WA 98368

Dear Washington State Department of Ecology,

Building dams is environmentally outdated & on the Chehalis River it would cause irreparable damage to healthy salmon runs & destruction of wildlife corridors. I encourage you, instead, to take the 'local action' alternative in the draft environmental impact statement. For flood control the state needs to focus on the restoration of forests & wetlands & better land-use practices .

Thank you for your time & thoughtful consideration of the needs & protection of this precious waterway & it's environment!

Sincerely,

Juliet Dickens
Seattle, WA 98117

Dear Washington State Department of Ecology,

Today I write as not only a concerned individual, a parent/grandparent, and voter, but also as a former educator. It is essential that you focus on actions that will not harm species and fragment the environment. The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Nj Morgan
Seattle, WA 98103

Dear Washington State Department of Ecology,

Hello, Let's use less invasive and destructive ways to manage our rivers. As mentioned here, improving forest lands, reducing pavement-related runoff and using landscaping like grassy swales (Something my wife wrote about in college for her AA degree) can greatly mitigate flooding and the risk of flooding. These preserve the character of our state, the habitats our fish and Orcas depend on, plus they can be put in place much faster than any dam project with fewer objections and at lower costs. The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Bruce Wade
Mount Vernon, WA 98274

Dear Washington State Department of Ecology,

Haven't we learned our lesson about damming Washington rivers? We know only too well the damage done to native salmon runs and other river wildlife from dams on the Elwha (now undammed and undergoing restoration, yay!) and the Snake and Columbia Rivers, awaiting dam removal and ecological remediation. Why would we even consider causing new damage to our river ecosystems with a new dam anywhere in the state? The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Cheryl McRill
Mount Vernon, WA 98274

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding. If we didn't allow building on flood plains, then flood control would not be necessary. Just how much of a priority are we as a species if it requires the extinction of all other species for us to be here?! We really must consider our own population control in the Pacific Northwest so that what makes this area so remarkable is allowed to survive! A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Gay and David Santerre
Buckley, WA 98321

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

I am a lifelong resident of Washington State and am horrified at the changes that have occurred over the past 50 years. Building another dam is horrific. What are you thinking? We are in climate change.

Thank you for considering my comment.

Sincerely,

Madeleine Wiley
Redmond, WA 98053

Dear Washington State Department of Ecology,

Washington should NOT be considering building a new dam on the Chehalis River for flood control, but instead focus on RESTORING NATURAL PROCESSES to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are ALREADY IN TROUBLE — and will in turn HARM ENDANGERED Southern Resident ORCA WHALES, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation LIMITING ACCESS TO RIPARIAN CORRIDORS for large carnivores, ungulates and other native wildlife. It is time humans stop thinking ONLY about themselves. We are part of a larger web of living community, which includes all animal, and plant life. What do you imagine we are going to eat when all the salmon are extinct, and the food chains cannot recover from our childish belief that we can do whatever we want without a care to the effect on other biological systems? The Department of Ecology MUST TAKE the 'LOCAL ACTION' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and NOT BUILD THIS DAMN.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife, AND our own species that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Mariana Sintay
Seattle, WA 98125

Dear Washington State Department of Ecology,

Please, do not build a dam on the Chehalis River. Using concrete to solve environmental issues is so outdated. The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Greg Willett
Wauna, WA 98395

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system. . Now is the to recognize all our past mistakes. Let's do this the right way. Thank you for considering my comment.

Sincerely,

Sandra Adams
Bremerton, WA 98312

Dear Washington State Department of Ecology,

Please please please, do NOT allow a new dam on the Chehalis River. We can and SHOULD focus on restoring natural processes to protect against flooding.

So many Washington citizens have been working so hard to restore to good health our salmon and steelhead runs that are already in deep trouble. We are doing this for ourselves, for our salmon, and for our resident orcas who absolutely must have healthy runs of salmon to survive. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

Please take the 'local action' alternative as presented in the draft EIS for the proposed Chehalis River Basin Flood Damage Reduction Project. Do not build this dam.

If Washington state and our local communities focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, we will be taking the path that is most forward-looking and sensible. Our grandchildren will thank you for this!!! Thank you for considering my comment.

Sincerely,

Leota Hair
Seattle, WA 98199

Dear Washington State Department of Ecology,

An urgent appeal from citizen Jeff Wiles of Coon Rapids, MN. Please give this subject your swift and full attention. The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Jeff Wiles
Minneapolis, MN 55448

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Sincerely,

Michael Betz
Bellingham, WA 98225

Dear Washington State Department of Ecology,

Why would we tear down the Elwa dam if it worked? Over the last few years science has shown dams are not the answer. A huge part of the flooding problem is due to large areas of impervious surface that do not have proper water management. Rather than try to control a river why not try to minimize our impact upon it?.

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Adrienne Blackburn
Yelm, WA 98597

Dear Washington State Department of Ecology,

Please don't dam the Chehalis River. I believe that habitat restoration and other land-use practices can provide better protection against flooding.

Thank you for your consideration.

Sincerely,

Shelley Minden
Seattle, WA 98102

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

Humans have caused great suffering and food challenges for the Southern Resident Killer Whales. How bad do things have to get on this planet before we stop destroying it and the inhabitants. If humans need something, we should think of things that will hurt another species. I feel this is true despite the embarrassing attitude that humans are the most important species on the planet. We are not. A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Sally Phillips
Seattle, WA 98126

Dear Washington State Department of Ecology,

A dam is not the answer. The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

R Delanoval
Seattle, WA 98155

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Please use alternative methods for flood control so that salmon can be preserved and to support the orca population.

Thank you for considering my comment.

Sincerely,

Margaret Graham
Seattle, WA 98117

Dear Washington State Department of Ecology,

Please, no more dams. The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

John Smith
Yakima, WA 98902

Dear Washington State Department of Ecology,

You've got to be kidding! We breaching dams, not building them. It's cheaper to move homes higher. The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

bob carson
Walla Walla, WA 99362

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

The damage caused by dams at this time in history outweighs the perceived benefits. The 'local action' option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system. This will be a much better alternative for all concerned. Thank you for considering my comment.

Sincerely,

Marilee Meyer
Port Angeles, WA 98362

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system. I support the cessation of clear cutting our forests which do so much damage to our riparian ecosystems. Change lumber harvesting practices to more sustainable ones and the need for dams will be minimized. Thank you for considering my comment.

Sincerely,

David Mayer
Olympia, WA 98502

Dear Washington State Department of Ecology,

Orcas are the whales in the coal mine. If we can't protect another large mammal in our shared environment, we may just find ourselves joining them on an endangered species list. The logic of building dams has been surpassed by better alternatives. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding and developing less impactful alternatives that are now feasible.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Daniel Wend
Seattle, WA 98198

Dear Washington State Department of Ecology,

. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

Diana Cristina
Port Angeles, WA 98362

Dear Washington State Department of Ecology,

we have seen what Damming rivers does to our native salmon populations and the effects it has on whales and even Bald eagle distribution and population from looking at rivers like the Skagit. We have seen success when you look at the wild rivers such as Noolsak and now the un-dammed Elwah River.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

The Flood of 2007 which impacted the town of PeEll where I lived at the time, would not have been prevented by a dam. Logging on several steep slopes led to logging debris clogging the river and taking out several bridges. The era of dams is over. Please stop this dam and prevent further building in the Chehalis flood plain.

Thank you for considering my comment.

Sincerely,

Barbara Kerschner
Centralia, WA 98531

Dear Washington State Department of Ecology,

Restoring habitat & protecting our wildlife should be an urgent priority.

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Wendy Wolf
North Bend, WA 98045

Dear Washington State Department of Ecology,

Building a flood control dam on the Chahalis river will do more harm than good. Instead of a new dam that will further endanger salmon runs and orcas, as well as other wildlife, Washington should focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, destruction of riparian ecosystems, and habitat fragmentation limiting access to travel corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Jana Hobbs
Kirkland, WA 98033

Dear Washington State Department of Ecology,

Kate McLaughlin
Seattle, WA 98133

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding. We took down two dams on the Elhwa and watched nature fix what the dams had destroyed. That is the critical lesson. A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Ronald Ein
Seattle, WA 98118

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

It makes no sense to put in a dam to control flooding when that involves deforestation that creates flooding.

I do not want my tax dollars spent protecting property owners who choose to live in a flood zone. Money that would be spent on a dam should go toward moving people out of the flood zone, elevating the freeway above the flood zone, and restoration projects on the river. A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival.

Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

It's time for the people of the United States to wake up. We cannot survive as a species on this planet by ignoring our responsibility to protect and nurture the natural world, which in turn is what sustains us, and ultimately makes our lives possible. It is no longer necessary to exploit Nature heedless of the consequences, nor do we need to resort to drastic technological methods to control Nature merely because we find what it does inconvenient. We have known about natural approaches to working with the environment for decades, and many dedicated naturalists in cooperation with scientists have continued to develop methods of interaction with nature which serve our own interests while promoting a healthy environment in which all creatures can thrive. It's long past time we made this kind of approach our priority. Please heed this message, and start fulfilling the actual purpose of a government department supposedly dedicated to Ecology.

Sincerely,

Robin Wilson
Minneapolis, MN 55432

Dear Washington State Department of Ecology,

Why does the solution for flood control always have to be building a dam which destroys habitat for wildlife and endangered salmon and steelhead? Enough with building more dams. Washington has more than enough dams already and should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

Thank you.

Sincerely,

Virginia Davis
Woodinville, WA 98072

Dear Washington State Department of Ecology,

You're kidding..another dam when our orcas are starving, the salmon runs which we've had for thousands of years dying out!! Think outside the box, please! There must be some natural ways to control flooding. Don't dam up the Chehalis River!.

Thank you for considering my comment.

Sincerely,

Bonnie Bledsoe
Seattle, WA 98125

Dear Washington State Department of Ecology,

It is imperative that we save the Chehalis River! Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding. Dam building is a thing of the past; we know more about ecosystems now and the importance of free flowing waters. AAs you may or may not know, a dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

You as leaders in the the Department of Ecology responsible for the health and welfare of the ecosystems in our state of Washington MUST take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and NOT build this dam.

The local action alternative will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system. This is the right thing to do and I'm sure you want to follow that path.

Thank you for considering my comment.

Sincerely,

Virginia Metcalf
Gig Harbor, WA 98335

Dear Washington State Department of Ecology,

The Center for Biological Diversity staff has written the letter below which I whole-heartedly endorse. Please read the recommendations thoughtfully. Thank you. The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

Thank you for considering my comment.

Sincerely,

Lynn Noel
Nine Mile Falls, WA 99026

Dear Washington State Department of Ecology,

The Center for Biodiversity wants to have it both ways, now it is promoting healthy forests as opposed to building flood control dams, yet they take forest land owners to court so they can't protect their trees from bears.

Screw these two faced assholes.

Thank you for considering my comment.

Sincerely,

Howard Wilson
Montesano, WA 98563

Dear Washington State Department of Ecology,

With endangered and threatened species at high risk in Washington State it is hard to understand why DOE would consider building yet another dam. Especially as dams are being removed in the region to recover critical habitats. Dams and channeling have left a legacy of environment damage and unintended consequences. We should be using environmentally positive habitat recovery and relocation. Another dam proposal seems like a failure of imagination.

Sincerely,

Patrick Townsend
Olympia, WA 98506

Dear Washington State Department of Ecology,

My grandparents lived near Chehalis (Oakville and later near Maytown. Other relatives still live in that area. I was born and raised in Western Washington. I grew up near the Kent Valley's once rich farmlands now all paved over. We used to fish on Puget Sound back when there were still some healthy fish. It's been so upsetting growing up and seeing the decline of fish and whales and native wildlife. While I sympathize with news for flood control on some areas, the cost to nature is too great to keep allowing unlimited development in flood plains. The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Susan Payne
Kent, WA 98042

Dear Washington State Department of Ecology,

In the year 2020, we know the error of our ways. Creating dams for energy or flood control was one of the worst possible decisions made by humanity. It has had devastating effects on the fragile ecosystem that we all rely on for our livelihood. Therefore, Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment and acting in the name of all species, not just humans.

Sincerely,

KRISTEN FORKEUTIS
Bow, WA 98232

Dear Washington State Department of Ecology,

Nancy and I are disappointed. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

John Woolley

Sincerely,

Karen Curry
Pullman, WA 99163

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

I eat wild salmon and need the nutrition that it supplies for my rare blood disease. Please protect the salmon. Thank you for considering my comment.

Sincerely,

Gloria McClintock
Mount Vernon, WA 98274

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis will threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife. Bad for the environment, wildlife and local communities. The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Matthew Lennon
Ellensburg, WA 98926

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife. Flood control is not the issue now: it's simple survival. Global climate breakdown and catastrophic abuse of the natural world for human convenience are pounding on the door. For all of us, and for the environment in which we live. If we don't make that the priority, it won't matter whether the Chehalis floods or not. We won't be around to know. The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system. This is the option that allows us all to live. Current dams in Washington will need to exist only until new sources of sustainable power are brought online, and then they too must be eliminated and allow the rivers to once again belong to nature, to all of us, and to “float all the canoes.” Thank you for considering my comment.

Sincerely,

Tom Cole
Lynnwood, WA 98087

Dear Washington State Department of Ecology,

Washington shouldn't be considering building a new dam on the Chehalis River for flood control but instead should focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble and will, in turn, harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates, and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas, and other wildlife that depend on this important river system.

Sincerely,

Mark Ashley
Bainbridge Island, WA 98110

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

Dear Washington State Department of Ecology,

Please do NOT dam the Chehalis. This river is incredibly necessary to all the ecosystems it supports—which are substantial. In particular, I am concerned about the salmon population and protecting killer whales. Please rethink this notion of any sort of dam—it's a terrible idea.

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Sean Cooper
East Wenatchee, WA 98802

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

As a citizen of Washington, I have seen the damage the dams do, and the wondrous restoration and good that happens when those dams are removed. How dare we built yet another dam? I have seen the damage that logging and development in the wrong places do to the natural environment, to natural flood control and abatement. Let's not do this again, please! The 'local action' alternative (as presented in the draft environmental impact statement) must be taken. No dam! This alternative will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Rikke Giles
Kingston, WA 98346

Dear Washington State Department of Ecology,

Please, understand..please look at the long term, and look further than human entitlement. We SHARE this earth and habitat with ALL the creatures. We are not given the right to make decisions which only enhance our own ease, mitigate our own 'troubles'. THIS IS ABOUT SURVIVAL, Y'ALL. The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. JJ L.
Olympia, WA 98501

Dear Washington State Department of Ecology,

(This may be a duplicate of an earlier comment which I'm not sure was sent due to a website failure). My comment: It is not only counter intuitive, but just plain stupid, to propose a project to limit flooding on the Chehalis River and in that plan include deforestation that will increase flooding. <https://www.knxx.org/post/proposed-new-dam-chehalis-address-chronic-flooding-raises-many-questions> The above article states that the dam '.structure would require clearing forest land along the river — and it would be massive.' It would make more sense economically to buy out the properties on the flood plain and create a preserve in their stead and to build a freeway overpass over the the flood plain. This is a once in a year event and in my opinion doesn't require a dam to fix the infrequent freeway flooding. If affected property owners refuse the offer, that is their choice. But I object to my tax dollars going to protect parties who make that choice. Therefore, I urge the Department of Ecology to take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dear Washington State Department of Ecology,

I write today to voice my concern our state of Washington should not be considering building a new dam on the Chehalis River for flood control. I, like many others here in Washington think that the era of building dams has finally come to an end, and instead of building dams we need to concentrate on restoring natural processes to protect against flooding.

As you are well aware, a dam on the Chehalis will threaten salmon and steelhead species that are already in trouble, and will in turn harm endangered Southern Resident killer whales, which depend on those salmon for their survival. You also know that dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

L. McLean
Seattle, WA 98117

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. THIS IS UNACCEPTABLE and counter to all the efforts being made to save the orcas. Dam construction would also adversely effect large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Ellen Kritzman
Vashon, WA 98070

Dear Washington State Department of Ecology,

I've heard about the effort being for a dam on the Chehalis River for flood control. I'd like to understand and be assured that there is a focus on restoring the natural habitat to protect against flooding. What has been done or studied to this affect? A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. This is one of my personal passions as I live in the Puget Sound region on Whidbey Island.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Clayton Granby
Freeland, WA 98249

Dear Washington State Department of Ecology,

Washington should not build a new dam on the Chehalis River for flood control but should instead focus on restoring natural processes to protect against flooding. The Chehalis River is the homeland of the Chehalis Confederated Tribes and provides habitat for the state's most robust population of wild salmon — food for endangered Southern Resident killer whales. Damming the river for flood control threatens this priceless waterway.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble, and will in turn harm endangered Southern Resident killer whales, which depend on salmon runs for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates, and other native wildlife. The Dep't. of Ecology must take the 'local action' alternative as presented in the draft EIS/environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas, and other wildlife that depend on this important river system. To control floods we must instead focus on restoring forests and wetlands, creating structures to enhance river complexity, and improving land-use practices rather than on building dams. THANK YOU for saving the Chehalis River by restoring habitat and promoting land-use practices to stop flooding and protect species instead of damming the priceless Chehalis River. .

Sincerely,

Judy Silverstein
Spokane, WA 99223

Dear Washington State Department of Ecology,

Tracy Mosier
Kelso, WA 98626

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

The state needs to focus on reforestation for erosion control so the soil can hold the water and slowly release it into the river drainages. We also need to be removing dams on the Columbia River to increase salmon production; building a dam on the Chehalis would devalue the biological studies that the taxpayers have funded showing, repeatedly, that dams impede the recovery of salmon populations; and that no human implemented 'runarounds' can work long-term. Taxpayers should not be funding what is ultimately a large, expensive band-aid to fix what is actually a failure to properly supervise and implement regenerative forestry practices.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

Dear Washington State Department of Ecology,

No new dams! We need to be removing dams, not building them. I am a biologist and have worked in the field of habitat restoration for salmon and other species for much of my career. So much money and effort have been spent on restoration and we still aren't making the headway necessary. Another dam would be a giant step backward, which is just intolerable. The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Weston Siegenthaler
Edmonds, WA 98026

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Michelle Ewens
Vancouver, WA 98685

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Christopher Lish
San Rafael, CA 94903

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Shirley Rogers
Renton, WA 98058

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Kirkland, WA 98033

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Jennifer Corrigan
Snohomish, WA 98290

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Judy Farrell

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Zack Lee

Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Peter Effertz
Seattle, WA 98144

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Lynda Travers

Tucson, AZ 85713

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Barbara Wallesz

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Patricia Kingsley
Auburn, WA 98001

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Wendy Peterson
Seattle, WA 98199

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Beatrice Greenwald
Seattle, WA 98133

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Susan Kane
East Wenatchee, WA 98802

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Jean Davis
Hoquiam, WA 98550

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Michael Hassett
Lake Stevens, WA 98258

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Lloyd Hedger
Tacoma, WA 98403

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Susan Heywood
Tacoma, WA 98408

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Sincerely,

Patrick Soby
Seattle, WA 98133

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Edmonds, WA 98026

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Raemie B

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Kimberly Teraberry

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Maggie May

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Marilyn Mayers

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Emily Baumgardner
Olympia, WA 98506

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Carol Whitehurst
Tacoma, WA 98406

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Kathryn Cooper
Port Angeles, WA 98362

Dear Washington State Department of Ecology,

The era of building dams has come to an end. Washington should not be considering building a new dam on the Chehalis River for flood control, but instead focus on restoring natural processes to protect against flooding.

A dam on the Chehalis would threaten salmon and steelhead species that are already in trouble — and will in turn harm endangered Southern Resident killer whales, which depend on salmon for their survival. Dam construction would cause direct habitat loss, changes to landcover types, and fragmentation limiting access to riparian corridors for large carnivores, ungulates and other native wildlife.

The Department of Ecology must take the 'local action' alternative as presented in the draft environmental impact statement for the proposed Chehalis River Basin Flood Damage Reduction Project and not build this dam.

This option will allow the state and local communities to focus on restoring habitat and promoting land-use practices that will both stop flooding and help to save salmon, orcas and other wildlife that depend on this important river system.

Thank you for considering my comment.

Sincerely,

Debra Goings

Reject the proposed dam on the Chehalis River

Dear WA Department of Ecology,

Please accept the following comments explaining my opposition to the proposed dam on the Chehalis River, which the Environmental Impact Statement (EIS) refers to as a 'flood retention facility.'

Dams significantly alter the hydrology, habitat, and ecosystems of the rivers they block. Even with mitigation measures, most dammed rivers are a sad echo of what they once were. Washington is one of the most dammed states in the country, and our efforts to dam almost every river and stream significantly contributed to the collapse of salmon across the region, leading to a cascade of effects on other wildlife, ecosystems, fishing economies, and tribal culture and way of life.

The Chehalis River is one of the last free-flowing, large rivers left in Washington. The EIS found that the proposed dam would cause significant and irreparable harm to salmon and steelhead runs in the Chehalis Basin. These are some of the only salmon runs in Washington not listed on the Endangered Species Act.

The loss of salmon will also impact starving and endangered southern resident orcas, who rely on coastal salmon runs (including those that spawn in the Chehalis Basin) during the winter and early spring. With just 72 orcas left, any action that further reduces salmon availability threatens these whales with extinction.

I also stand with the Quinault Nation and am extremely concerned that this dam violates the 1856 Treaty of Olympia.

The EIS also casts doubt as to how effective this dam will be. Fewer than half of structures impacted by flooding now would be protected by the dam, and several sections of I-5 would still experience regular, severe flooding. As climate change further intensifies flooding, it is unlikely that this dam can deliver the long-term solution the Basin needs.

While the EIS proposes mitigation actions for the dam, they are insufficient to fully protect endangered wildlife. The impacts of the proposed dam would be too severe to fully offset. Instead, we encourage the Chehalis Basin Board and Department of Ecology to fully assess conservation alternatives that rely on ecological restoration activities in the upper Basin to reduce flood risks downstream. Such actions can and should include: reforestation efforts, re-establishing flood plain form and function, restoring wetlands, expanding habitat protections, and installing municipal green stormwater infrastructure facilities along I-5 and in urban communities.

We encourage the Department to reject the proposed dam on the Chehalis River and develop a new plan to reduce the impacts of flooding in the Basin.

Sincerely,

Comments:

Thank you for receiving comments on the proposed Chehalis River Basin Flood Damage Reduction Project.

495 supporters have signed onto the following message:

I am writing to express my opposition to a new dam on the Chehalis River, a project that is currently being analyzed by the Department of Ecology. As northwest salmon populations continue to dwindle, we need to put forward solutions that work for fish and for people – this dam won't cut it. The Chehalis River basin is clearly in need of a comprehensive strategy to address both heavy flooding and salmon and steelhead declines. Unfortunately, the current dam proposal will not comprehensively address either problem. The proposed dam is not fiscally responsible, and it comes with unacceptable impacts to the river. I urge you to direct the Department of Ecology to work towards solutions that do not rely on the failed approaches of the last century that we know are bad for fish and bad for the environment.

Please find the names & information of the 495 supporters of this petition attached. The first 219 have also written their own personal messages in addition to signing onto the petition.

A billion dollars can be put to much better use than a dam, especially in light of the economic disaster that has only just begun. Besides that, it is the era of removing dams, not building new ones. A dam on the Chehalis River would degrade fish habitat, reduce fish populations, in one of the area's most fish-populated rivers - we need to keep our wild fish, not make it more difficult for them to live. It is time to find new and better solutions to our problems, not to merely continue to do the same old ineffective and wasteful things we have in the past. The Earth needs us to find new ways, we have to start now.

Janice Klinski
Olympia, WA

All dams should be destroyed, its unnatural

Susan K. Falls
Enumclaw, WA

America's future generations need us to find a better solution than one which simply repeats mistakes made in the past. Mistakes which we are now paying dearly for.

Timothy Goldenberger
North Bend, WA

Another dam will not only endanger the survival of the salmon, it will endanger our ORCAs as well. NO MORE DAMS are necessary - Please rethink this proposed dam!

Karen Groth
Hansville, WA

Anyone who values Nature would oppose this dam proposal. I have followed this issue closely and worked in natural resource management for many years. There are better options which will stabilize the over-logged area and protect the salmon runs. There is no real need for any new dams.

Steve Robinson
Olympia, WA

As a native Northwesterner, I am concerned about the threats to our native salmon populations.

Mark Stewart
Seattle, WA

As someone who's career was related to the construction industry, I've always said "Just because you can doesn't mean you should." Both commercial and residential developments occur on flat land because it's less expensive despite the potential risk of flooding. We all pay the price with insurance rates, emergency repairs, etc. because of the decision of a few who take the money and run. Building a dam only perpetuates this greed but now at the risk of the flora and fauna that need the Chehalis River. Building a dam would be mindless of the long-term consequences.

Michael Jones
Longview, WA

As wild salmon and steelhead continue to hurtle toward extinction, the last thing we need is another irresponsible dam in the Northwest. No new dam! Thank you!

P Perron
Seattle, WA

As wild salmon and steelhead continue to hurtle toward extinction, the last thing we need is another irresponsible dam in the Northwest. No new dam! Thank you!

P Perron
Seattle, WA

Ask yourself whether you respect the panorama of life on this planet, the only one we will ever have. Then, try to explain to your children and grand-children (I have both) why you would support yet another damn dam that will lead to the extinction of two species that we claim are vital to the environment and collective culture of the Pacific Northwest. Then look in the mirror and ask yourself who you really are and what you value about living here!

Michael Shurgot
Seattle, WA

At a time in our development that tells us dams are not all they as seem someone proposes building another. Where is really green energy. No dam on the Chehalis River, DAM!!

Patricia Lenzen
Vancouver, WA

At this point, we have technology that will allow us to produce electricity without harming the environment in such an irreversible way. Building and using the alternate technologies are equally able to create jobs as building a dam.

Anne Hepfer
Seattle, WA

Building another dam that will negatively affect the salmon population is a step backwards. We need to protect the declining population. It is not an ecologically sound measure.

Sandra Maloff
Vancouver, WA

Building dams will certainly doom our fish and wildlife- please do not allow this to happen!

Lisa Dennison
Seattle, WA

Currently the emphasis is on breaching dams, particularly on the Snake River in our northwest region. Building a dam that will further disturb and decrease the fish runs short sighted and fool hardy. I'm all for flood control but we need to work with the natural world not against it, that is if we want to continue surviving on this planet. Dams work against the natural world by simple brute force--force the water where you want it not where the laws of nature intended it. We cannot continue to bend nature to our will and also think nature won't level us to extinction. We are part of the web, not the web builder. Take an hour and watch Damnation on You Tube, it will make you feel good.

Patricia Freiberg
Vancouver, WA

Dam removal has proved a boon for rivers and streams. Let's not compound the mistakes of the past by building yet more dams and instead create new answers to old problems.

sylvia covington
Vancouver, WA

Damming the Chehalis River is a mistake. It will hurt the river ecosystem dramatically. I oppose this dam vehemently. Please do not move forward with this dam.

Doug McPhee
Camas, WA

Damming the Chehalis River is moving in the wrong direction. Dams are the biggest single cause in the decline of salmon populations, and some dams have even been removed to aid in their recovery.

Julia McLaughlin
Rochester, WA

Damming the river is not a sustainable solution! We need the wildness and the rivers as they are to promote life- even with a fish ladder so many other species will be affected. There are other ways solve our need for more!

Jennifer Kettle
Seattle, WA

Dams are proven to have a detrimental impact on wildlife and ecosystems. As natural resource management professional, I have a heartfelt interest in shifting human impacts to that which is positive and renewing for both the earth and its inhabitants.

Melissa Roberts
Olympia, WA

Dams are the main reason our salmon and orcas are in danger of going extinct, and we cannot afford to build another misguided dam project. Please don't allow this proposal to move forward.

Nick Engelfried
Bellingham, WA

Dams in general have caused massive disruption to wildlife and to the spawning of salmon, etc., in our rivers. I'm actually surprised this is even being considered while there are efforts to remove dams around the state.

Chelsea Kearns
Seattle, WA

Dear Gov. Inslee, You should be tearing DOWN dams not building MORE!

Elizabeth Cunningham
Seattle, WA

Dear Governor Inslee -- Once again humans think they can outsmart nature -- but a Chehalis dam won't effectively prevent flooding and will harm salmon and other natural wildlife. Please say No! to a new dam! Haven't we learned our lesson yet?

Jan Von Lehe
Seattle, WA

Dear Governor Inslee -- Once again humans think they can outsmart nature -- but a Chehalis dam won't effectively prevent flooding and will harm salmon and other natural wildlife. Please say No! to a new dam! Haven't we learned our lesson yet?

Jan Von Lehe
Seattle, WA

Dear Governor Inslee -- Once again humans think they can outsmart nature -- but a Chehalis dam won't effectively prevent flooding and will harm salmon and other natural wildlife. Please say No! to a new dam! Haven't we learned our lesson yet?

Jan Von Lehe
Seattle, WA

Destroying habitat for short term goals is misguided. We have learned by now that this sort of "solution" causes more harm than good, stop this terrible idea. Mary Jones Seattle

Mary Jones
Seattle, WA

Do not allow this boondoggle to come into being! It is a "cure" worse than the problem it is proposed to fix!

Frances Blair
Steilacoom, WA

Do the right thing and protect native fish populations in Washington and listen to the voices of the Chehalis and Quinault Nations who oppose this dam!

Karli McIntyre
SPOKANE, WA

Every single dam in the United States threatens ecosystems and biodiversity that is already fragile enough from the effects of climate change, pollution, and ramshackle management. In the northwest, the salmon and steelhead are already threatened by the dams that cut off their access to their spawning grounds and are equally threatened by the reservoirs that absorb the sun's heat thus heating the water to uninhabitable temperatures. Along with threats to salmon and steelhead, there's the threat to wetlands. Wetlands are vital to preventing flooding and to carbon absorption. Related to all those factors, the first people of this land are strongly and rightfully opposed to the construction of the Chehalis River Dam. I'm doing what's right by standing with them in protecting the lands and waters they've lived with since time immemorial. I am helping them protect the salmon and steelhead relatives from destruction of their habitat. This dam cannot and must not be built.

Ric Berkholtz
Seattle, WA

Extinction is forever. You have a talented staff and many caring Washington citizens expect to see creative, effective ideas that will both bolster our precious, endangered salmon and minimize flooding.

Randall Collins
SEATTLE, WA

Extinction of the salmon and our fish runs is FOREVER. Please think of our natural world for a change. In this day and age we are talking about taking down dams not putting them up. Look at the history of the Elwa in WA state and the success story that occurred once the dams were removed. Don't move backwards we want to move forward for the future of our children and the planet.

Jan Black
Olympia, WA

Extinction of the salmon and our fish runs is FOREVER. Please think of our natural world for a change. In this day and age we are talking about taking down dams not putting them up. Jan Black
Olympia, WA

Find some other way to address flood damage. Buying downstream land is probably cheaper than the dam.

Katie Berkowitz
Olympia, WA

For the wildlife and personal satisfaction that we the people can actually enjoy the ecosystem as it is now and well not be disturbed any further that well harm the flora and fauna even more. If people of this state want to build their business or home in a flood zone that should be their responsibility not the tax payers of Washington state or at the expense also of the natural surroundings.

Michsel Grieb
Chehalis, WA

Governor Inslee: We all know how damaging the dams on the Snake are to native salmon and we know that dams are damaging to the environment in general. Why build another one on the Chehalis when we know that improving and restoring the natural flow of the river and allowing the natural flooding in the flood plain makes much more sense? Please stop this continue abuse of our natural environment. Stop the dam (flood control structure) on the Chehalis River.

Lois Ward
Olympia, WA

Governor Inslee: We all know how damaging the dams on the Snake are to native salmon and we know that dams are damaging to the environment in general. Why build another one on the Chehalis when we know that improving and restoring the natural flow of the river and allowing the natural flooding in the flood plain makes much more sense? Please stop this continue abuse of our natural environment. Stop the dam (flood control structure) on the Chehalis River.

Lois Ward
Olympia, WA

Has NO ONE realized WHY the Orcas are dying? Cut off the Salmon runs by blocking their migration,; DO. THE. DAMNED. MATH. This is NOT ecologically sound nor resemble for anyone living thing or for the environment. Continuing to repeddle "old plans" and used measures doe NOTHING to correct any defects or issue experienced in the past. Continuing to ignore mistakes of the past continue to create mistakes for the future. Washington's better than this. The Orcas and Salmon are better than this. The citizens of Washington are better than this. SHAME. ON. YOU!

Margaret Mehegan
Lacey, WA

Haven't we learned by now that we err fatally when tampering with the natural flow of rivers and their ecological role in the health of the greater ecosystems they traverse?

Carrie Gonzalez
Olympia, WA

Haven't we already learned that dams are the harm and not the answer!

Yolanda Sayles
Gig Harbor, WA

Having clean cold water for our native salmon is crucial for our region's healthy environment and culture. No new dams should be built on any of our rivers.

Angus Brackett
Seattle, WA

Hi, I am property owner in Lewis county and my family and I often walk to the Chehalis River. We would hate to see wildlife damaged by a dam. Humans need change their behavior to accommodate the natural behavior of

rivers and the affects of climate change.

Anna Naughton
Seattle, WA

How many fish ecosystems have been screwed up by dams that will still need to be removed? Development (often pushed by "JOBS!") without responsible environmental input just makes no sense.

Pamela Webster
Ridgefield, WA

Humans do not have the right to extinguish all species and their habitats! Humans and their businesses can move OUT of the flood plain! This is a destructive archaic, extremely expensive dam project and unnecessary!!

Susan Sandwell
Olympia, WA

I actually live in Lewis County. Our home is not affected by flooding, but we have trouble traveling into town when it floods. I am strongly opposed to any dam project on the Chehalis River and agree we need to work toward other better solutions.

Jenny O'Neill
Chehalis, WA

I am against damming the Chehalis river. Salmon are a keystone species. They fee the Orcas. When they return to a river to spawn their death fertilizes the soil with nitrogen-15 from the ocean, helpingthe growth of trees. In turn the trees reinforce the stream banks from erosion and feed and house beavers and are homes for native birds. Most of the rivers in the world are damned. We have upset the balance in ecosystems. Nature gave birth to us. We need to protect her. Mary Morgan

Mary Morgan
Seattle, WA

I am concerned that the large negative environmental impact outweighs any proposed benefit for the proposed Chehalis dam which seems like a sledge hammer solution to the problem. It seems to me that looking upstream and at the river itself for how development has altered the land's ability to absorb flooding and mitigate by renaturalizing and limiting development in the flood plain makes much more economic and environmental sense.

Diane Boteler
Eastsound, WA

I am opposed to the proposed to the Chehalis River Dam because it threatens already endangered salmon and would negatively impact greenhouse gas emissions. the Salmon and Orca are critical for all people in Washington State and especially indigenous people.

Bill Sampson
Seattle, WA

I am very concerned with the prospect of the Chehalis River dam proposal. Coming from an area that installed the same sort of dam. It was after there was a report submitted saying that there were no salmon in the creek, even though all the neighbors said there were salmon on the creek. But now after the installation there are always salmon dying at the bottom of the dam. This was definitely a plan gone awry and feel that the Chehalis River dam will cause the same problem. So if you don't listen to the science at the very least you should be required to install fish ladders!

Kathy Staley
Chehalis, WA

I appreciate the many things on which you, Governor Inslee, have focused attention to create awareness of the need to help our planet function well for the benefit of our future, so I hope that you will consider this petition as a part of your mission to prioritize the health of our planet.

Constance Corrick
Seattle, WA

I appreciate the many things on which you, Governor Inslee, have focused attention to create awareness of the need to help our planet function well for the benefit of our future, so I hope that you will consider this petition as a part of your mission to prioritize the health of our planet.

Constance Corrick
Seattle, WA

I believe we need to be more concerned about protecting our wonderful wild life and wild environment. Please do not approve this misguided dam! Thank you

Katie & John Parry
Ridgefield, WA

I believe we need to be more concerned about protecting our wonderful wild life and wild environment. Please do not approve this misguided dam! Thank you

Katie & John Parry
Ridgefield, WA

I believe we need to be more concerned about protecting our wonderful wild life and wild environment. Please do not approve this misguided dam! Thank you

Katie & John Parry
Ridgefield, WA

I can see no reason for a dam in western Washington. Keeping ecosystems alive is important.

Hugh Kimball
Seattle, WA

I cannot believe any Dept. of Ecology can support this project. For shame.

Ola Edwards
Seattle, WA

I do not want another river closed to our increasingly threatened salmon. This will negatively affect ocean life as well as the salmon runs. Our local Orca Whales are suffering and need salmon. NO to the proposed Chehalis Dam.

Laurie Schaetzel-Hill
Olympia, WA

I find it utterly irresponsible that in the current climate, when there is enough scientific data to back up how terrible dams are in the long run, a progressive state like Washington would even consider this. I am a Washington resident, and grew up on the Southern I-5 corridor, I am familiar with the area, the structures built there with an understanding of the risk, thus it's not the taxpayers responsibility to reduce it. In regards to I-5, you can take all the money you stole from Washington residents who passed a measure for \$30 dollar tags and use it to fix the problem the proper way, by fixing the road not changing the river.

Joshua Burck
Yakima, WA

I have studied about declining salmon populations in the NW for many years. Damning rivers, destruction of habitat are huge contributors to salmon decimation. Salmon are the lifeblood of the NW natural world. Get a grip on reality. Scrap any damn proposals.

Lynn Brevig
Seattle, WA

I have worked in the commercial fishing industry and am deeply concerned about degradation in salmon habitat. Dams are not the answer to this problem. Do not build this dam.

Kris Freeman
Seattle, WA

I live on a tributary stream that flows into the Chehalis River. I do my best to maintain habit for the dwindling Salmon population and I'm asking you to do the same. Please protect the environment and say no to additional barriers to our fish returning home here in Waddell Creek. NO DAM ON THE CHEHALIS RIVER PLEASE. ITS JUST ABSURD

Shilo De La Cruz
Olympia, WA

I lived near the Chehalis River as a child, and damming it is an expensive and questionable solution to flooding. We expected it to flood and lived with it--it only became more severe as more shopping centers and houses were built there. My suggestion would be to quit allowing development on the flood plain. A dam will also be ruinous to the fish--and that river used to be full of fish! I think a dam is a very bad idea.

Nancy Knowles
Woodland, WA

I may not live close to this river, but there is so much irreplaceable value to leaving the free-flowing river alone. It always bothers me to see humans trying to alter nature to suit themselves. If you don't want to get flooded out, stop building in flood plains. We've already caused enough damage to natural systems, & it is time to find better solutions than constructing another damn dam. Just don't do it.

Connie Hughes
Yakima, WA

I oppose dam building on the Chehalis because of the damage it will do to wildlife.

William Persky
Olympia, WA

I oppose the Chehalis River dam because of its negative impact on fish, wetlands and the lands along the river which is basically the largest water way in my community. A more effective solution to the flooding that threatens the small cities near I 5 is to restore the natural floodplain function to the basin. It is important to listen to the advice of impacted tribes. The tribes oppose the dam.

Loretta Seppanen
Olympia, WA

I oppose the Chehalis River dam. I care about the environment. The dam will have a major negative impact on fish, especially the spring Chinook, and their habitat. It will provide minimal flood damage reduction compared to other options. These other options have a higher benefit for less cost. Options include: regulations, raising elevations of repetitive loss properties or moving them. It's an all around bad idea.

Kathy Swartout
Lacey, WA

I oppose this dam because of the environmental impacts and the astronomical cost.

Michelle Stepp
Olympia, WA

I respectfully request that the proposed dam on the Chehalis be denied. This is not the time to build new dams anywhere. Look at what just happened in Michigan. We are so much smarter than this. In the 21st century, we know that dams are not the wisest way to protect people from flooding. The natural courses and nature of waterways must be respected. Zoning to prevent construction in flood zones and other projects that damage the river's natural flows only lead to failures at some point, and waste tax dollars. In addition, our salmon runs are damaged and people and other wildlife that depend on salmon are suffering. We should do everything to support salmon and all native fish in Washington. Let's not go backwards. Look at the success of the Elwha dam removal. The river quickly started to get healthier; fish began to return. It's a celebrated success. No more dams, please!

Joan Miller
Seattle, WA

I say "NO" to a dam. If we want a free flowing river that supports wild fish and wildlife, we must accept periodic flooding as a natural result of excessive rainfall.

Roger Chapanis
Sammamish, WA

I stand in solidarity with salmon, the Quinalt Nation and the Chehalis Tribe.

Jean Avery
Vancouver, WA

I strongly oppose this dam on the Chehalis River. I have already written in support of a letter recently sent by Earth Ministry in support of the objections and serious concerns raised by the Quinalt Nation, the Chehalis Tribes, and the Chehalis River Alliance. I have lived and worked in and with the people of the Chehalis River watershed on and off through out my life, growing up in Grays Harbor County (10 years in Elma), and serving as United Methodist pastor in Pe Ell, Doty, and Dryad along the upper Chehalis River in the Willapa Hills. Please don't build this dam! Listen to the salmon and the water and the forest and the animals and the First Peoples and to your own eternal souls instead of individualistic, short-term profit driven, ultimately self-destructive motives. Protect the holy gift of Creation. Don't build this dam! Find ways together to live in concert with the "eons-old" sacred and life-giving ecology of this watershed. Please! Don't! Build! This! Dam!

Randall (randy) Henderson
Lacey, WA

I think we've messed with salmon enough, don't you?

Kathryne Herold
Seattle, WA

I thought the era of dam building was over! This proposal is totally unnecessary. The Pacific Northwest has plenty of dams already, and our salmon and orcas have been paying for it for decades. Enough is enough. We need to be taking dams down, not building new ones.

Sarah Kavage
Seattle, WA

I understand the negative impact of flooding on I-5 and agree it is a concern. However, there are other ways of addressing the issue.

Andrea Brokaw
Oak Harbor, WA

I urge you to abandon the current plan to dam the Chehalis River. The salmon need this watershed to survive. We need a functioning ecosystem to manage the watershed for diverse needs. Damming the river is not the right solution.

Martha Taylor
Seattle, WA

I've lived in the floodplain and through multiple floods and recognize that the natural course of action is for this river to do what it is. This river creates the ecosystem by which so many make a living to contribute their part of a robust economy. Fish, forestry, indigenous rights and culture, and independent careers should not be compromised by a one size fits all answer to economic stability. Consider the independent spirit of entrepreneurship that resides within this watershed versus the corporate infrastructure. The economy needs both. Preserve what cannot be replaced, look to the national trends of removing dams, and maintain the integrity of local people dependent on their local watershed and ecosystem!

Brian McElfresh
Rochester, WA

It is our duty and our job to protect all wildlife and this proposed Chehalis dam threatens it and puts native fish that are already on the brink of extinction in jeopardy. Don't let this happen!

Frances Crosby
Kelso, WA

Impacts to the overall environment for a region from a proposed project have been ignored for far too long. Please stop this project until its impact to fish and the entire ecosystem is examined.

Peter Renner
Seattle, WA

Is this dam really necessary? Will it improve the lives of folks living downstream? Building a dam on the Chehalis is a step backwards. Just look at the cost of the Elwha dam removal. That will be the ultimate fate of the proposed dam too.

Leif Anderson
Bremerton, WA

It is much more important to protect the salmon and the ecosystem than it is to build a dam. Period. Don't do it!

Serena Donnelly
Camas, WA

It's clear the damage these dams do to fish habitat. We're running out of time to protect wild salmon stock. Let's think long term for once and not create more environmental degradation. Thank you.

Anne McDuffie
Seattle, WA

Jay, it is time to give the fish a chance. C'mon, this is backwards. Unconscionable.

John Weeks
Seattle, WA

Let Nature take its own course, the way it should.

Nancy Mcelfresh
Rochester, WA

Let us continue working for right now and for the future environment. Please protect the Chehalis river.

Valerie Lange
Tumwater, WA

Let us not add to the degradation of the salmon habitat. Rather let us find a way to live with the Chehalis River rather than putting up a dam.

Janet Hedgepath
Vancouver, WA

Let's move past creating new dams and invest in alternative energy methods!

Jonah Griffith
Seattle, WA

Listen to and respect the tribal elders.

Gwynne Brown
Tacoma, WA

My wife and I live in Chehalis. It's not the planet's fault that white people decided to settle in the floodplains, then log off all the timber. The Chehalis is the largest non-dammed river in Washington. It supports more amphibian diversity than any other river. If you want to protect I-5 with dikes or whatever, that's fine. But please please don't dam the Chehalis!!

Bill Barmettler
Chehalis, WA

My wife and I live south of the Chehalis area, but enjoy travelling the river valley on weekend drives. In an era when we've learned that dams equal catastrophic damage to fish and other wildlife, there has got to be a better way to safeguard our communities from flood.

Ron S Moore
Longview, WA

Native fish are endangered and need to be protected not destroyed by a dam! There are far better ways to protect communities from flooding and keep the river flowing naturally. Dams are being dismantled in Washington and many other places because of their devastating effect on wildlife and surrounding lands. Has the Department of Ecology considered re-introducing beavers to protect surrounding lands from flooding? Please work toward a solution for the flooding that will also protect fish stocks and other wildlife.

Annie Cubberly
Olympia, WA

No dam protect our streams and rivers

Lisa Berck
Vancouver, WA

No Dam!!

Kathleen Mcbeth
Bellevue, WA

No damn dam

Lisa Berck
Vancouver, WA

No damn dam

Lisa Berck
Vancouver, WA

No damned dam.

Allison Ostrer
Seattle, WA

No more Dam it

Elizabeth Cunningham
Seattle, WA

no more damns. If anything, remove them.

Bill Link
La Center, WA

No more damns. They harm wildlife and the ecology. Make another plan.

Denise Link
Olympia, WA

no more dams

Carol Stevens
Yelm, WA

no more dams that harm our salmon and the orca and disrupt the natural flow of rivers - invest in solar and wind power!

Elizabeth Nedeff
Seattle, WA

No more dams! We need our salmon back! Please find another way.

Krisna Mohler
Seattle, WA

Now more than ever, we need to be good stewards of the land. This dam is simply too destructive to our environment, and our future. There are better solutions. Please deny the permit for this proposed dam.

Cindy Creager
Kenmore, WA

Now, more than ever, we need to realize how a diverse and healthy environment is to our physical and mental health. Man's impact and construction on our home has been much too great in the past and we have to stop interfering with nature's way in order to make it easier for man's way. This dam will threaten endangered fish species and provide very little benefit over the long term.

Becky Andrade
Lacey, WA

Our iconic salmon species are already in deep trouble -- an additional dam is the worst possible idea for salmon health, wetlands and wildlife.

Polly Freeman
Seattle, WA

Our salmon need all the help they can get.

roger hoffeditz
seattle, WA

People need wild places. We need to know not everything has been altered and despoiled by humans. It was humans that caused the flooding and meddling more by putting in a dam will have both unforeseen and foreseen consequences. Let the Chehalis flow free. Find other ways to cope with flooding.

Annie Cubberly
Olympia, WA

Please act responsibly & be good stewards of this planet for our future generations. My family settled in Centralia; established the Grier Glove Company and lived and worked there throughout their lives. Be bold. Find an alternative to this dam.

Farley Bartelmes
Kirkland, WA

Please do not damn this river and put salmon at risk.

Diana Dexter
Vancouver, WA

Please do whatever it takes to stop the building of the Chehalis dam.

Helen Read
Seattle, WA

Please don't let this dam happen. This is an awesome river and we hike alongside it every day. This dam will kill fish, and even with the "habitat improvements" they say will be made, the EIS clearly states this is not going to save the fish. Please stand with the tribes and environmentalists and say NO to this dam. Thank you

Marcy Anholt
Chehalis, WA

Please don't let this dam happen! The Chehalis River is far too important to have a dam in its future!! The Chinook salmon and all of the other species are so important for the orcas and the cycle continues. No one should be able to disrupt the cycle!

Lou Orr
Shoreline, WA

Please learn the lessons of the histories of each and every other dam built in the Northwest and elsewhere! Dams destroy wild fish runs!

Jeffrey Norman
Bellevue, WA

Please let us be a leader in environmental health and fiscal responsibility.

Kyle Noble
Olympia, WA

Please look for another solution for fooding, once you damage the river it is very very hard if ever to bring back the life that thrives. A look to the Elwha shows you in real time the years it took to get the river and salmon back. Thank you.

cyndi cross
Seattle, WA

Please protect our nation's wilderness and rivers

Pete Reagel
Seattle, WA

Please take more time to research the negative impacts of putting a new dam on the Chehalis. There are other options that are not so detrimental to fish populations and so fiscally irresponsible.

Karen Meadows-Hills
Seattle, WA

Please, let's keep our delicate wildlife as healthy as we can. We are already doing so much damage to these ecosystems, which then impact the rest of us though we don't want to readily see it. If this is to thwart flooding of lower areas, address those causes first. This is not the way to do this. Additional flooding, warm weather, etc. is caused by climate change. Fix that, then move forward. Hurting salmon habitat and subsequently orca habitat, and those of other affected species is not the answer. Humans need to fix the human-caused issues.

Margaret Vandenberg
Seattle, WA

Please, let's keep our delicate wildlife as healthy as we can. We are already doing so much damage to these ecosystems, which then impact the rest of us though we don't want to readily see it. If this is to thwart flooding of lower areas, address those causes first. This is not the way to do this. Additional flooding, warm weather, etc. is caused by climate change. Charles Fuller
La Center, WA

Shameful to build a damn on Chehalis to speed up the extinction of our precious fish.

Lynda Cunningh
Camas, WA

Soon there will be no wilderness left untouched. Why does this have to happen. In whose interests does this serve?

Tara Vargas
Washougal, WA

Stop messing with Mother Nature. This is not the answer.

Barbara Churchill Binder
Centralia, WA

Thank you for considering input from all Americans.

Diana Ruth Nichols
Vancouver, WA

Thank you for the opportunity to express my opposition to this proposal. I see both sides of the issue having suffered the devastating flood of 2007. Following the flood, millions of dollars went toward redesigning I-5 to withstand another flood. On the other side of the river, so to speak, I am proud that Salmon and Steelhead in the Chehalis River has not been designated as threatened...yet. There is a reason for that. I don't believe this designation should give license to decision makers to disrupt and destroy the natural flow of the Chehalis River and threaten Salmon. Salmon is Washington's heritage. Isn't it time we consider the true motivation behind continually stripping the land of its natural habitat and the life it supports? Who stands to gain the most from this billion dollar dam?

Valerie Vaughn
Olympia, WA

Thank you for your support for so many environmental issues. Please continue to support the survival of wild salmon.

Sandra Ciske
Seattle, WA

The adverse impacts of building this dam are too costly to fish populations, climate recovery, wetlands, wildlife and our state's budget. For all of these important reasons, I join the Chehalis tribe and the Quinault Indian Nation, fish advocates, environmentalists and recreationists in opposing the construction of the Chehalis River dam.

Kathy Albert
Seattle, WA

The Army Core of Engineers ruined the wild salmon population in California, Oregon and Washington state by building dams don't do it too the Chehalis River

Ron Beckham
Yelm, WA

The beautiful state of Washington would not be the same without running waters, salmon, preservation of natural habitat. It would be very sad to see more degradation of salmon habitat. The natural world needs our help, not more destruction.

Carol Kochta
Olympia, WA

The Chehalis River is a vitally important habitat for salmon and a wide range of wildlife. This dam would cause irreparable harm to this habitat, and runs counter to all the efforts Washington state has made to restore salmon populations. At a time when breaching the dams on the Columbia River is an increasingly viable consideration, why would we be building a dam on the Chehalis? In the 1990s, I wrote my master's thesis on flood plain management in the Chehalis River watershed. Poor planning and coordination, along with continued development in the flood plain, are the problems that need addressing. We do NOT need to dam the river! Kasia Pierzga Olympia, Wash.

Kasia Pierzga
Olympia, WA

The Chehalis River is important for salmon and steelhead and that are necessary for our starving orca. The Chehalis and Quinault Tribes rely on these fish as a vital part of their culture and economy. The proposed dam is an extremely expensive and ineffective response to a complex problem. We need a response that prioritizes restoring the watershed, wetlands and riparian zones to reduce and modulate flooding. We should look at buying out the most at risk properties to help restore the flood plain and focus on buffering I-5 directly.

Bill Arthur
Seattle, WA

The Chehalis River is nature's gift to everyone. My wife and I very strongly oppose this unneeded and unnecessary dam. In America today, fewer dams are needed, not more. We ask that you abandon the Chehalis river dam.

Lehman Holder
Vancouver, WA

The Chehalis River is one of the few rivers that flow directly to the ocean that does not have a dam. Improvements to river habitat will help restore fish runs and benefit other species as well. The Elwah River is a prime example of river restoration after dam removal. Let's not build a dam on the Chehalis that affects our dwindling salmon and steelhead.

Dennis Rice
Washougal, WA

The Chehalis River must not be dammed, it must run wild for salmon and other wildlife. Please, no man-made structures on the Chehalis River.

Donna Snow
Lacey, WA

The Chehalis river runs through areas I have enjoyed for 30 years . With other energy options available there isn't any reason for another dam. It will destroy the riparian eco system that has been healthy for years. Thank you.

Joan Scofield
Olympia, WA

The dam proposal is another insult to nature. When will past lessons be learned!

Den Mark Wichar
Vancouver, WA

The dam will have a negative impact on fish habitat AND it will be expensive.. We don't need another dam.

Shawn Baz
Seattle, WA

The Elwha is once again a free-flowing river and truly a marvel in regeneration, including abundant fish populations. We know too much today about the destructive effects of damming in the American West to make this same mistake again on the Chehalis. Doing all we can to protect the salmon runs for native tribes and nations, as well as settler sport anglers, is an ethical obligation that the largely white power structure must honor.

Tom Strawman
Anacortes, WA

The last solution we need is another dam! We are struggling currently with other dams impacting fish habitat and Native American rights. We need to look for better solutions to flood control.

Doores Kueffler
Vancouver, WA

The northwest receives ample rainfall each year and typically suffers floods. Placing additional dams on our waterways will only exacerbate this problem and cost Washington more tax payer funds as well as cause damage to our ecosystems. Don't allow this dam.

Andrew Jacoby II
Randle, WA

The proposed dam on the Chehalis River must not be allowed to move forward. We are at a critical point in history of making a choice between saving what remains of our ecosystems, wildlife and endangered species. If the dam is built, it will deal a major blow to remaining endangered wild steelhead and spring chinook salmon that use the headwaters for spawning ground. This in turn will also harm the critically endangered southern resident killer whales which depend on healthy salmon runs for survival. The Chehalis watershed has the most diverse amphibian habitat of any watershed in Washington. Dam construction would cause direct habitat loss for many species, including amphibians. Flood control is a thing of the past. The era of dam building is over. We need to be working towards flood resiliency in the face of climate change!

Asha McElfresh
Rochester, WA

The rivers belong to the animals. \$1 billion is better spent relocating development that is in the floodplain, where we don't belong.

Dana Berthold Hendricks
Stevenson, WA

The salmon is disappearing!

Samuel Garbi
Vancouver, WA

The Veterans' Ecological Trades Collective exists to support veterans and allies in acquiring skills that launch or refine careers in Conservation, Agriculture, Forestry and Ecological Design. We provide lifelong networking opportunities for the advancement of veteran's mutual aid, regional food security and natural resource conservation. It is our vision that all veterans who are willing and able to practice their trades in an ecologically informed manner will be able to access gainful employment working with the land or its produce. The Chehalis River Dam will impact the conservation efforts of our mission and can not stand.

Penny Dex
Centralia, WA

There are better alternatives than ruining wildlife and salmon!! PLEASE don't dam up the Chehalis River area.

L Wayn
olympia, WA

There are better things to concentrate on & spend precious money in other more environmentally friendly ways!

Marie Gallagher
Anacortes, WA

There are plenty of solutions that are as effective and less invasive. Oh and cheaper too. I am opposed

Mike. Goodwin
Richland, WA

This appears to be a bad idea if it will interfere with salmon migration. If that is a consequence of this project, you need to find a better way to deal with the flooding issues.

Michael Carrol
Olympia, WA

This area is needed to protect wildlife especially salmon my family are fishermen And we are mostly vegetarian/pescatarian please protect this free flowing river

Sharon Bucher
Battle Ground, WA

This is an incredibly misguided and destructive plan with no sound environmental justification. It is imperative that you do everything in your power to prevent this damned damn project from being implemented. We'll be monitoring and will remember in November.

Charles M. Fink
Seattle, WA

This is crazy! We need to restore the environment not destroy it.

Rita Hogan
Olympia, WA

This is not just an engineering problem.

JOSEPH BARRECA
Kettle Falls, WA

This is the last thing we need right now if we're serious about trying to save salmon.

Paul Ames Reinhold
Seattle, WA

This matters to me because I do not want salmon to go extinct and I think that is already a very real possibility and with one more dam on one more river it seems like a given. Please find another way.

Luan Pinson
Vancouver, WA

This project appears to create more problems than it solves. The benefits are few and don't eliminate flooding; the negative consequences are many - most notably to the salmon. What the dam WON'T do: · End flooding: the plan would only reduce I-5 closures · Generate hydropower for Lewis County residents · Supply water to Chehalis basin farmers · Create new recreational opportunities What the dam will do: · Require significant logging and costly ongoing debris removal · Drown 6 miles of critical salmon and steelhead habitat · Worsen the Chehalis River's existing water quality issues · Increase the risk of future flood damage if it triggers more floodplain development. I oppose the proposed \$628 million to \$1 billion Chehalis Dam. A new dam will not eliminate flooding and would significantly impact fish, wildlife, aquatic and terrestrial habitat.

Kasia Pierzga
Olympia, WA

Throwing away taxpayer dollars to fail to accomplish a solution to flooding, while also eliminating salmon runs and destroying river habitat is a criminal enterprise. The people suggesting this are stealing our hard-earned dollars!

Joel Hanson
Spokane, WA

To flood-proof I-5, focus on solutions at the highway, not changing the natural flow of the Chehalis! Homes or structures can be raised at a cost much lower than that of a new dam, especially considering long-term costs. And, you'll have fish!

Dave Wechner
Coupeville, WA

We all know why this dam should not happen, don't succumb to pressure!

Carol Root
Seattle, WA

We already know the damage of damming! Why can't we learn from our mistakes or has money become more important than our planet and all the creatures living on it?!

Carol Smith
Lacey, WA

We are at a time at which dam removal should be considered to protect salmon spawning grounds, not building more dams. There is nothing that I want more than to see the use of more renewable energy in the Pacific Northwest, but we know that dams are not as ecologically friendly as once thought. This dam is not the right move for us to take. Additionally, we are continuing to overlook the impacts of dams on indigenous communities. It has become far too common for native peoples' needs to be overlooked and this is the time to be undoing those injustices, not adding to them. This dam pushes us in the wrong direction.

Tanner O'Brien
Camas, WA

We can get the renewable energy we need from wind power with far less environmental destruction than what another dam will do.

Laurence Severtson
Olympia, WA

We cannot continue to rely on solutions that hurt our environment and extend the damaging legacy of colonization against the Chehalis and Quinault Peoples. Please reject this project!

Jeff Deluca
Olympia, WA

We can't let these symbols of the Pacific Northwest become extinct. Please do not go forward with this dam.

Lana Hoover
Seattle, WA

We don't need it!

Thomas Fifarek
Vancouver, WA

We don't need a dam on the Chehalis River because it will effect our salmon and steelhead runs. The wildlife out in that area will be effected also. Also the cost for this dam, who is paying for it.

Mary Kennedy
Longview, WA

We don't need another dam, It will effect so many inviromental things. Nature has a handle on it, the dam is not necessary.

Jessica Jones
Olympia, WA

We don't need more dams destroying precious habitat!

Carol Jacobs-Carre
Seattle, WA

we have enough dams in the united states and globally, no more dams!!!

Nathan Tallar
Normandy Park, WA

We have other ways to produce clean energy. Let?s not destroy more habitats by building another dam.

Marta Janer
Seattle, WA

We have to be more sensitive to the needs of nature. Fish need rivers without dams. Building a dam overlooks the full needs of nature, and does not address the truth that mankind actually needs nature's needs fully accommodated. Mankind only hurts itself in the long run if it ignores the rest of nature's full needs.

Frederick Duhring
Seattle, WA

We have to be more sensitive to the needs of nature. Fish need rivers without dams. Building a dam overlooks the full needs of nature, and does not address the truth that mankind actually needs nature's needs fully accommodated. Mankind only hurts itself in the long run if it ignores the rest of nature's full needs.

Frederick Duhring
Seattle, WA

We have to be more sensitive to the needs of nature. Fish need rivers without dams. Building a dam overlooks the full needs of nature, and does not address the truth that mankind actually needs nature's needs fully accommodated. Mankind only hurts itself in the long run if it ignores the rest of nature's full needs.

Frederick Duhring
Seattle, WA

We have to be more sensitive to the needs of nature. Fish need rivers without dams. Building a dam overlooks the full needs of nature, and does not address the truth that mankind actually needs nature's needs fully accommodated. Mankind only hurts itself in the long run if it ignores the rest of nature's full needs.

Frederick Duhring
Seattle, WA

We have to protect our natural resources now. Look how we need to take away the dams that we have made.

Susi Hulbert
Longview, WA

We have to start doing more to preserve our environment and all that live in it. Salmon plays such a huge part in culture and as a food source it should be protected

Vianna Engel
Rochester, WA

We live in one of the most beautiful regions in the world. We don't need to destroy our environment at the cost of cheap power. WE DON'T NEED IT AND WE DON'T WANT IT.

EDWIN BUCKLEY
LAKEWOOD, WA

We must keep the Chehalis River free-flowing for salmon and people.

Donna Snow
Lacey, WA

We must preserve habitat for salmon and other impacted species. Damming more rivers is a bad choice for the environment and will contribute to degradation of our local climate. Will we ever learn to live as a part of nature rather than to dominate and destroy our beautiful home in this world? Please protect our natural environment - no dam.

Suellen Knight
Tumwater, WA

We must protect our native fish population from becoming extinct. Therefore, please recognize the harm that the Chehalis Dam presents.

Ellen Wagner
Lacey, WA

We must stand in solidarity with salmon, the Quinault Nation and Chehalis Tribe, and climate change activists to oppose projects like this one. This dam will be ineffective, environmentally-destructive, and comes with a hefty price tag.

W Koopman
Olympia, WA

We need more free-flowing rivers, not more concrete dams that obstruct water flow and salmon migration. Let's not take a step backwards.

Bruce Sanchez
Seattle, WA

We need real climate change, not the same old "let's destroy" the rivers and fish

Catherine Adams
Seattle, WA

We need to be taking dams down, not putting them up. If folks don't want to live in a floodplain, they need to move.

Patricia Kolstad
Olympia, WA

We need to do things to preserve the native fish population rather than taking its history. Please do not build the Chehalis Dam.

Enid Cox
Vancouver, WA

We need to explore other options that incorporate restoration of wetlands, use of Native American practices and knowledge, and best science for preserving the ability of native fish to thrive.

Maureen Hildreth
Vancouver, WA

We need to find other ways of sustainable energy production besides damming up our rivers. This only leads to further endangering salmon populations and disrupting the ecosystem. Our rivers are precious and we need to prioritize them!

Jennifer Seel
Olympia, WA

WE need to get rid of dams, not build new ones! there are other ways to alleviate flooding!

Klouise Cook
Seattle, WA

We need to maintain our environment better. We don't need another dam - It's not clear what the purpose of this dam is, however, if it is for hydroelectric power we should not build it. We would be better to further energy sources such as solar and wind power rather than destroying our rivers.

Ruth King
Lacey, WA

We need to protect the natural ecosystem of fish and the species that rely on it.

Augusta Butlin
Seattle, WA

We need to take down dams not build more. There has to be another solution than to wreck the Chehalis River for the salmon but also for the people; tribe citizens and the public that use this river AND the environment. Building dams were the mistake of years past. There needs to be another solution. The Department of Ecology has to start using techniques that don't harm us and future generations.

Linda Kroeger
Seattle, WA

we say no to the chehalis dam. we need to preserve the fish and the environment.

Lyle Smith
Vancouver, WA

We should continue to REMOVE dams for the sake of our salmon and wild spaces.

GAIL HECMANCUK
Tacoma, WA

We simply don't need another dam. There are plenty of other environmentally-friendly technologies, and millions of acres on the east side of the Cascades on which to put them. Salmon are suffering enough as it is, and regardless of the work-around the dam uses to get salmon upstream, it simply won't be as good as the natural order of things.

Chris Roberts
Kalama, WA

We're still trying to get rid of other dams in WA, so please don't erect another one. Give the salmon and nature a chance. It's easier for us to change our behaviors than them.

Sharon and James Price
Seattle, WA

We've eaten salmon caught on the Chehalis River on friends property, where our dogs have all frolicked in the shallows. We've seen beavers cutting trees for a home. No dam on the Chehalis!

Richard Hurst
Lacey, WA

What we need are innovative technology that coexist with nature instead of destroying it. Money is better spent on improving old out of date hydroelectric systems.

Felipe Morales
Washougal, WA

Where we currently live we used to see 8 to 10 salmon swim up our creeks, now we're lucky to see 3, a dam would make it worse.

Linda and Robert Capps
Centralia, WA

Whereas I know people who live in the Chehalis River flood plain and that flooding is a problem for them, I think that we need to look at the bigger picture in solving this problem and see how we can reduce runoff upstream and not harm the salmon and steelhead and the natural processes of the river. There are more people to consider than the farmers in the valley and the travelers through the area.

Miriam West
Olympia, WA

While dams can have beneficial impacts for humans, they are detrimental to the ecology of natural environments. Salmon populations are already seeing detrimental decreases in population size due to human caused climate impacts and this would increase that risk even more. It is integral that you think more thoroughly about the damage this dam would cause to natural ecosystems compared to the small human gain. Please consider other options to address heavy flooding.

Talia Berkman
seattle, WA

While I agree that mitigating the chances and severity of flooding is needed, I do not feel that this is the best course of action. Clear cutting our forests and the ensuing loss of permeable soils is the major cause of the severe floods we've encountered these past few decades. THAT is what needs to change. Please do not degrade the inherent health of this watershed. Protect it by changing how various HUMAN activities within the watershed negatively impact the incidence of flooding. Thanks for reading my comments!

David Mayer
Olympia, WA

While I understand this dam is meant to mitigate future flood damage, there are too many negative effects, on fish and wildlife, on wetlands, and the impact on the indigenous peoples of the area. Surely we have enough knowledge and science to be able to problem solve without resorting to an outmoded system such as a dam--our communities need and expect better!!

Sherri Bentley
Olympia, WA

While we do need to find a way to mitigate harm to agriculture from the disastrous seasonal flooding of the Chehalis River, damming the river, thereby damaging or wiping out the regional ecosystem, is unacceptable. A lot of really creative cooperation by a lot of people who don't usually work together will serve us well now.

Julia Rosmond
Olympia, WA

Who thought of this DAM project!!! IT'S NOT the solution. But would create more PROBLEMS.

Tj Jennings
Olympia, WA

with the climate change in full blossom please to not create more problems

James Keeley
Vancouver, WA

With the removal of the Elwah dam outside of Port Angeles and the recovery of a lost river system and its positive impact on the improvements of salmon population and general improvement of this river ecosystem, why would we go back to the a time when dams were put in place based on a lack of understanding of its impacts on the

entire ecosystem. I strongly oppose the building of this structure based on it the false assumptions of its proposed benefits.

Brian Hawkins
Port Orchard, WA

Yet another misguided project putting human interests above natures. No, absolutely no to another dam. If there is worries of floods spend the money buying the homes in the flood zone and make it an area where people can't build. Our salmon need rivers that aren't dammed, all the wildlife and plants in the area need natural spaces. Please don't dam the Chehalis. Kate Williams

Kathleen Williams
Rainier, WA

You cannot prevent major events as the 2007 flood, and they are going to get worse. You need to stop hauling gravel in to fill the valley floor to build WalMarts and auto dealers. Oh ya, and build above the flood plain, which is for growing food
